3. Investment Objective

The investment objective of the Fund is to provide long term capital growth primarily through investment in global equity securities of small and medium sized companies with geographical and industry sector diversification.

There can be no assurance or guarantee that the Fund will achieve its investment objective.

4. Investment Policy

The Fund invests in a diversified portfolio of small (typically companies with a market capitalisation of under \$1 billion at the time of investment) and medium sized (typically companies with a market capitalisation of under \$25 billion at the time of investment) company that offer positive earnings growth over the medium to long term. The Fund will identify small and medium sized companies by ranking stocks in the overall market by their market capitalisation. The goal of the Fund is to identify smaller companies that are already profitable and to hold those companies over the longer term while they deliver future growth. It is the growth of cash flow and earnings which is ultimately expected to drive share price returns over the medium to long term.

The Fund may invest up to a maximum of 20% of its Net Asset Value in emerging markets (to include China, South Korea, Taiwan, India, South Africa, Brazil, Chile, Colombia, Mexico, Peru, Indonesia, Malaysia, Philippines, Thailand, Turkey, the UAE, Qatar, Poland, Hungary and Egypt).

The Fund will not have any industry/sector focus.

Whilst it is the intention that the Fund be principally invested in equity securities which are listed or traded globally on a Recognised Exchange, the Investment Manager retains the flexibility to invest substantially in cash and/or money market instruments such as treasury bills where market conditions so warrant and/or the Investment Manager considers it to be in the best interest of the Fund to do so.

Investment Strategy

The Investment Manager utilises a disciplined stock picking approach, as detailed below, driven by both quantitative analysis and fundamental research of individual companies. It is a multi-stage process designed to be transparent and consistent over time.

The initial stage of the process involves use of a quantitative screen to identify small and medium sized companies which are profitable and which are also expected to experience earnings growth over the medium to long term. The quantitative screen utilises historic published information on company profits, coupled with profit forecasts compiled by the Investment Manager, to identify companies which may be likely to increase their profits and hence experience earnings growth. The screen then ranks the subset of companies by financial metrics that can be grouped into three broad categories (1) returns on investment (2) earnings growth and (3) valuations compared to other companies, each of which is also assessed based on historic financial information on individual companies and forecasts compiled by the Investment Manager. The focus of the screening process is to generate investment ideas that can be prioritised for further research.

The second stage of the process involves the fundamental analysis of those potential

investment candidates. This involves analysing the company and its business strategy, the company's financial statements (assets, liabilities and earnings) together with reviewing its competitive position within its end market place. Fundamental analysis is performed on historical and present data, but with the goal of making financial forecasts. Fundamental analysis places an emphasis upon turnover expectations, cost expectations and other items such as borrowing costs and taxation, which can impact a company's profitability.

The next stage of the process involves investment selection based on the Investment Manager's assessment of the company's value versus the current share price of the company.

The final stage of the process is portfolio construction. The Fund is constructed from the stock level, bottom up. However, the Investment Manager will regularly review industry sector and geographic exposures to ensure the Fund is sufficiently diversified.

Performance Measure

The Fund is considered to be actively managed in reference to the MSCI World SMID Index (Bloomberg ticker: MXWOSM (converted to Euro)¹) (the "Index") solely by virtue of the fact that it uses the Index for performance comparison purposes. The Index captures mid and small cap representation across 23 developed markets ("DM") countries (DM countries include: Australia, Austria, Belgium, Canada, Denmark, Finland, France, Germany, Hong Kong, Ireland, Israel, Italy, Japan, Netherlands, New Zealand, Norway, Portugal, Singapore, Spain, Sweden, Switzerland, the UK and the US). As at the date of this Supplement, the Index comprises 1,646 constituents. The Index is not used to define the portfolio composition of the Fund, or as a performance target, and the Fund may be wholly invested in securities which are not constituents of the Index.
